History Object

The history object contains the URLs visited by the user (within a browser window).

The history object is part of the window object and is accessed through the `window.history` property.

Note: There is no public standard that applies to the history object, but all major browsers support it.

History Object Properties

Property	Description
<u>length</u>	Returns the number of URLs in the history list

History Object Methods

Method	Description
<u>back()</u>	Loads the previous URL in the history list
